### Design

**4000 0x, 11, 21**

Metering stations from 1/2 to 2, including a 1/2 Low Flow and Medium Flow version. Manufactured in DZR Brass and supplied with test points already fitted.

### Application

**4000 0x, 11, 21**

Metering valves are used in the flow and partnered with a DRV in the return to give the required control. Simple and cost effective for all applications, but must not be used for regulation. This is done on the DRV.

**4000 3x**

These metering valves are used combined with flange valves. Designed in accordance with BS1042. Flow characteristic confirmed to BS7350. Can be close coupled to a DR valve complying with BS 7350. Outside diameter locates centrally within flange bolting to BS EN 1092-2 PN16. Self-sealing pressure test point

### Technical Data

**4000 0x, 11, 21**

Max. operating temperature 130 °C

Max. operating pressure 20 bar

Water purity according to OeNORM H5195 and VDI 2035

**4000 3x**

Min. operating temperature - 10 °C

Max. operating temperature 130 °C

Max. operating pressure 16 bar

Note: The test point has a maximum temperature of 130 °C. If other test points are fitted the maximum temperature should be obtained from the manufacturer.

### ☑ **Materials**

**4000 0x, 11, 21**

Body	brass CC752S
Test point	brass CW602N

**4000 3x**

Body	Stainless Steel
Extension	Stainless Steel
Test point	brass CW602N

### ☑ **HERZ connection adapters for plastic, copper and steel pipes**

The metering station can optionally be connected to a threaded pipe or used on a calibrated copper pipe compression adapter. Compression adapters must be ordered separately.

#### **HERZ compression adapters**

HERZ compression adapters for copper and steel pipes, allowable temperature and pressure ratings according to EN 1254-2 1998 Table 5.

#### **HERZ plastic pipe connections**

Max. operating temperature 95 ° C

Max. operating pressure 10 bar, if approved by the pipe manufacturer

Ammonia contained in hemp can damage brass valve bodies, EPDM gaskets can be affected by Mineral oils lubricants and thus lead to failure of the EPDM seals. Please refer to manufacturers documentation when using ethylene glycol products for frost and corrosion protection.

For further information, see data sheet **6273 – 6294**.

### ☑ **Accessories**

1 <b>8900 04</b>	HERZ-Measuring device
1 <b>8903 02</b>	HERZ-Measuring device

### ☑ **Spare parts**

1 <b>0284 01</b>	test point for HERZ circuit control valve, blue cap (return)
1 <b>0284 02</b>	test point for HERZ circuit control valve, red cap (flow)
1 <b>0284 11</b>	test point for HERZ circuit control valve, extended model, blue cap (return)
1 <b>0284 12</b>	test point for HERZ circuit control valve, extended model, red cap (flow)

### ☑ **Measuring**

Fixed orifice double regulating valves must always be installed with a minimum of 10 pipe diameters of straight pipe, without intrusion, upstream of the orifice plate. Downstream of the valve a minimum of 5 pipe diameters of straight pipe are required.

1 **4000 0x, 11, 21 + 1 4117**

1 **4000 0x, 11, 21 + 1 4217**
